

PERIPHERAL / ONCOLOGICAL MICRO CATHETERS

The distal 40 cm is covered with hydrophilic.

The distal end is flexible and soft.

The proximal body of the catheter is rigid for support.

Pushability and torqueability are very high.

The coaxial guide wire has a structure that tapers from proximal to distal and is polymer coated.

There are 2 markers distally.

REFERENCE	BRAND	COAXIAL GUIDE WIRE A	DISTAL DIAMETER O.D. B	PROXIMAL DIAMETER O.D. C	I.D.	LENGTH D
